### 16 Sunstream Boat Lifts becomes MLACC member

Hailing from the state of Washington, Sunstream Boat Lifts has joined the Marine Industries Association of Collier County.

For more than 10 years,

within days: it presented its proven "FloatLift."

Exempt from state of Florida permitting, customers can take delivery of the lift and

pending on local jurisdictions) that using a FloatLift now could improve the time of their dock permitting process because they would not have to have a lift and dock reviewed by agencies at the same time.

The design and operation of the FloatLift lets even the most inexperienced boater dock with ease.

Another great use of the FloatLift is for boaters whose waterfront becomes too shallow to launch during a low tide. Because the FloatLift is not attached to anything other than the dock or seawall, the stern of the boat and lift together could be swung to the deeper water so that the boater would have enough tide to use his boat.

The water under the bow end of the lift might be shallow, but the stern end could have enough to permit entry and exit from the lift. This would give the boater a much greater opportunity to use his boat more often.

For fast, reliable and safe water access and more information, call Luke Webb at (toll-free) 866-786-5438 or visit the Web site at [www.sunstreamcorp.com](http://www.sunstreamcorp.com).

Sunstream Corporation has had a presence in Florida, but is new to Southwest Florida. Recognizing the need for boat lifts along the canals and coastal waterways, Sunstream has decided to introduce their boat lifts to the area.

With the post-hurricane permitting and dock construction delays, the company has an excellent solution to get boaters back on the water

within in days, be utilizing it. Because it ties like a boat and is solar charging and remote controlled, boaters can easily and quickly get their boat on and off the water.

The lift floats and is tied to a dock by using common dock lines. The FloatLift protects boats at virtually any location, including on a mooring buoy.

There's a possibility (de-
