

Choosing the Right Boat Lift

"Our Sunstream boat lift has added more time and enjoyment to my family's boating than any other piece of equipment we've purchased. My neighbors marvel at how I launch, at the touch of a button – like it's magic!"

- John F., SunLift Customer

The Importance of Choosing the Right Lift

Choosing the right lift is one of the most important long-term decisions you make for your waterfront property or slip. From the first launch, a boat lift immediately becomes a vital part of your boating experience, and your gateway to boating. The right lift will enhance your boating fun and increase the resale value of your property.

Choosing the right boat lift from the right company will help to maximize your summer fun for many years to come

Ultimate Hydraulic Power in an Attractive Package

Just as hydraulic power replaced cables in steam shovels 50 years ago, Sunstream has harnessed hydraulic technology to create the new generation of boat lifts that provides vastly improved performance and a more attractive invisible appearance on your dock. A direct result of Sunstream's innovations, boaters around the world proudly use their boats more often, with greater enjoyment and safety.

- Easier use: launch in seconds, instead of minutes, with key-chain remote control operation.
- Improved performance: faster operation, drastically improved reliability, no noisy cables or pulleys to break or replace, and no frequent adjustments required as with cable lifts.
- Greater family safety: hands-free docking, and an advanced engineered design that guides your landing and safely locks your boat in place — with the simple push of a button.
- Proper for the waterfront ambiance: fast, yet quiet operation; its hidden design puts your boat on a pedestal instead of inside a metal cage.
- Improved portability: a compact design makes seasonal lift removal easier.

Essential Components

A boat lift must be built to withstand years of operation in a harsh marine environment. Your individual experience will depend on the design and performance of the lift's three essential operating systems: the hydraulic, electrical and structural systems. Failure of any of these could ruin a boating outing, or leave you stranded in the water for days.

Through extensive research and testing over the past decade, Sunstream has perfected these three vital systems, so they can exceed your expectations.

Your gateway to boating™

Uniquely Sunstream

1 – Marine-grade Hydraulic Lifting System

- Stainless-steel construction of cylinder rams prevents pitting and seal failure.
- Multi-cylinder design spreads the load evenly.

- Bronze shaft scrapers remove marine growth, which increases hydraulic system life.
- SunFluid™ (hydraulic fluid) is water-soluble, longer-lasting, environmentally friendly and does not stain your dock like oil.

Stainless shaft and bronze scraper seal

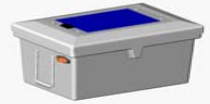

2 – “Smart” Electrical System

- The remote control has an automatic “sleep mode” so you do not need to remember to turn the lift off each time you use your boat.
- An available sealed, no-maintenance, high-capacity battery eliminates the need to fill lead-acid batteries every few months.
- A low-battery indicator light gives you early warning.
- 12 Watt Solar Panel provides 20% more power than other lifts.

- Marine-grade transmitters are sealed and water resistant.
- Water tight connector plugs prevent corrosion failures.
- Electronic filtering prevents electrical surge damage.

Decorative and durable fiberglass PowerPack™

Half the size of other boxes, Sunstream's PowerPack™ includes rubber grommet seals between the hoses and box that help to keep water and bugs out. Non-rusting, stainless hinge and locking hasp add security

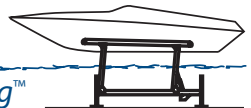

3 – Advance Engineered Frame and Support

- Sturdy, rust-proof frame is constructed with marine-grade aluminum (twice as thick as some competing lifts) and stainless steel fasteners, maximizing lift life. Sunstream does not use galvanized steel, as rusting over time in critical areas such as pivot joints can cause structural failures.
- Automatic GravityLock™ locks to secure the boat in the raised position.
- **SuperBunks™**

- Durable rubber-capped aluminum supports cradle and cushion your hull and guide your docking.
- The spring-beam patented bunk design provides the softest loading of boat hull.
- Self-cleaning design does not retain hull-scratching grit nor become moldy like carpeted-wood bunks.

Your gateway to boating™

Industry Experts Recommend Sunstream

Boat dealers and waterfront construction specialists around the world recommend Sunstream lifts to their customer.

"It is a phenomenal product. I use one for my own boat and I highly recommend it."

Stephen Heese, President, Chris-Craft Boats

"I highly recommend Sunstream's state-of-the-art boat lifts to our Cobalt customers. Sunstream's advanced technology makes boating more enjoyable."

Pack St. Clair, CEO, Cobalt Boats

SunLift™, SunLift Mini™ and DockJock™

Best Service and Warranty

Through its extensive dealer network, Sunstream provides the best service and warranty in the boat lift industry. Sunstream confidently provides a three-year parts and labor on-site warranty, which covers all essential systems, such as the hydraulics, electrical and frame.

About Sunstream

Sunstream's loyal customers have made them the largest manufacturer of hydraulic boat lifts worldwide. Sunstream promises to provide the highest quality products coupled with the best service the marine industry offers. Trusted for reliable performance, Sunstream lifts are preferred by recreational and commercial boaters, including the US Coast Guard, US Navy and marine law enforcement agencies.
